0 2	On August 3, 1982, during normal operations of the Plant Service Water (PSW) System
0 3	isolation valve Q1P44-F119 closed due to a secondary containment isolation signal
0 4	generated by a reactor protection system electrical fault. This valve is air-
0 5	operated and failed to properly indicate its status in the Control Room. This
0 6	event is reportable pursuant to T.S.6.9.1.13.b. Plant service water was lost until
0 7	the valve could be opened but there was no additional adverse safety implications.
7 8	Inoperability of the secondary containment isolation valve is addressed in 9 T.S.3.6.6.2 CAUSE CAUSE CAUSE COMP VALVE

[1][0]	CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27) Snap-lock limit switches were not positioned correctly giving dual indications on
	control panel. Maintenance correctly positioned the limit switches and retested
	the valve/indication successfully. This is intended to be a final report.
