DUKE POWER

February 24, 1994

U. S. Nuclear Regulatory Commission
ATTN: Document Control Desk
Washington, D. C. 20555

Subject: McGuire Nuclear Station, Unit 1
Docket Number 50-369
Core Operating Limits Report for Cycle 9, Revision 2

Please find attached, pursuant to McGuire Technical Specification 6.9.1.9, revision 2 to the Core Operating Limits Report for McGuire Unit 1 Cycle 9.

This revision adds an information note to the rod insertion limits curve, figure 2, specifying that a penalty to the curve is required if the unit's power becomes limited by the main turbine (i.e. main turbine throttle valve fully open and reactor power still less than 100%). This penalty is 2.3 steps per percent power below 100% to which the reactor power is limited.

If there are any questions, please call Richard Clark at (704) 382-5823.

Very truly yours,

K. S. Canady
Manager, Nuclear Engineering,
Nuclear Services,
Nuclear Generation Department
