Docket No. 50-336
B10549

Mr. Darrell G. Eisenhut, Director
Division of Licensing
Office of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D.C. 20555

- References: (1) W. G. Council letter to D. G. Eisenhut, dated
June 4, 1982.
- (2) E. P. Rahe letter to D. G. Eisenhut, dated
June 28, 1982.

Gentlemen:

Millstone Nuclear Power Station, Unit No. 2
NUREG-0737, Items II.K.3.30 and II.K.3.31
Small Break LOCA Analysis

Reference (1) provided Northeast Nuclear Energy Company's (NNECO) response to Generic letter No. 82-10 concerning implementation dates for selected TMI Action Plan items identified in NUREG-0737. In response to Items II.K.3.30 and II.K.3.31, NNECO informed the NRC Staff of difficulties experienced by our fuel vendor which would delay the completion of small break LOCA model revisions. NNECO committed in Reference (1) to provide the Staff with a revised schedule by which the upgraded small break LOCA model for Millstone Unit No. 2 will be submitted.

NNECO has been informed by the fuel vendor in Reference (2) that the small break LOCA model applicable to Combustion Engineering nuclear steam supply systems will be submitted to the Staff by March 15, 1983. Plant specific small break LOCA analyses utilizing the revised models are scheduled to be complete within one year after Staff approval of the model as specified in Item II.K.3.31

A046

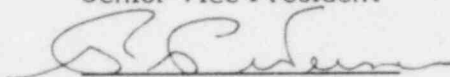

of NUREG-0737. NNECO will provide the results of these analyses to the Staff at that time. The applicability of the current docketed small break LOCA analysis results for Cycle 6 operation will be the subject of future correspondence.

Very truly yours,

NORTHEAST NUCLEAR ENERGY COMPANY

W. G. Council
