February 15, 1994

Mr. Leif Norrholm
Chief, Vendor Inspection Branch
Division of Reactor Inspection
and Licensee Performance
Office of Nuclear Reactor Regulation
U. S. Nuclear Regulatory Commission
Washington, D. C. 20555

Dear Mr. Norrholm:

Subject: Disposition of Error Notices Received From Boeing Computer Services

- References:
1. NRC letter to Chief Civil Engineer, Bechtel Gaithersburg Office, dated December 16, 1993, Docket No. 99900519
 2. NRC letter to Mercedes Dumlao, Bechtel Computer Services Library, dated December 16, 1993
 3. H. Hollingshaus letter to Mr. Leif Norrholm dated January 12, 1994

Bechtel has reviewed its files in response to References 1 and 2.

To the best of our knowledge, Bechtel personnel did not utilize any of the computer programs listed in References 1 and 2 through Boeing Computer Services (BCS). Therefore, Bechtel's evaluations of the subject error notices, received through BCS, recognized this non-utilization and they were dispositioned accordingly.

Bechtel has made limited use of GTSTRUDL. This use was on specific projects through the client's licensing agreements for the use of this program. Accordingly, the subject error notices were dispositioned by these clients.

Bechtel has used the ANSYS program through its own license with the program owner, installed it on the Bechtel Unisys computer, and performed the required validation and verification in accordance with Bechtel procedures. Bechtel has received error notices through this licensing agreement and has processed them in accordance with Bechtel procedures. In addition, Bechtel used the ANSYS program through a contract with Control Data Corporation, later renamed Power Computing

Company. This involved the use of the service bureau's license and the error notices received by the licensee were forwarded to Bechtel and processed as above.

Bechtel has not used the NUPIPE program on any nuclear project.

If further information is required, please contact me at (301) 417-3777.

Very truly yours,

BECHTEL POWER CORPORATION
