

September 20, 1982

Docket No.: 50-537

APPLICANT: Department of Energy, TVA and PNC
FACILITY: Clinch River Breeder Reactor
SUBJECT: SUMMARY OF SEPTEMBER 15, 1982 CRBR LWA-2 TMBDB and SMBDB

A meeting was held with the applicants in the evening of September 15, 1982 in Bethesda, Md. to review the issues of TMBDB and SMBDB which pose open safety items for the proposed LWA-2. The list of attendees is attached.

TMBDB and SMBDB issues related to the first ring of containment and lifts 1 and 2 of the base mat inside containment were discussed. In order to demonstrate the applicants' contention that any reasonable resolution of SMBDB issues would not involve lifts 1 and 2, the applicant committed to perform a scoping calculation on the capability of the reactor cavity structure to accommodate mechanical loads functionally related to HCDA energetics release.

This information will guide future direction for resolution of the SMBDB issues for LWA-2.
