Gentlemen:

This refers to the routine, unannounced radiation safety inspection conducted by Ms. L. L. Kasner and Mr. R. A. Leonardi of this office on August 31, 1990, of the activities authorized by NRC Byproduct Material License No. 35-26815-01, and to the discussion of our findings held by the inspectors with the radiation safety officer (RSO) at the conclusion of the inspection.

The inspection was an examination of the activities conducted under the license as they relate to radiation safety and to compliance with the Commission's rules and regulations and the conditions of the license. The inspection consisted of selective examinations of procedures and representative records, interviews of personnel, independent measurements, and observation of licensee personnel conducting radiographic operations at a temporary jobsite.

The inspector observed that the RSO had focused sufficient attention to the radiation safety program and that tasks which had been delegated to other individuals had been adequately monitored to ensure that they were properly completed. Records documenting radiographers' training; byproduct material receipt and use; and equipment inspection, maintenance, and calibrations were well organized and complete in content. Radiographic operations observed during this inspection were conducted in accordance with the conditions of the license and NRC requirements.

Please note that no violations were observed during this inspection and no response to this letter is required.

In accordance with 10 CFR 2.790 of the Commission's regulations, a copy of this letter will be placed in the NRC Public Document Room.
