Re: License: 35-23137-01
Docket: 30-20298
EA: 90-003

Dear Mr. Beach:

I made my last monthly visit to Petro Data, Inc. on September 22nd. The third audit of their operations involving radioactive materials was conducted on that date. The following is my report:

1. Records - leak test survey meter calibration, tracer log, sealed source utilization log, radiation mounting forms, storage surveys, physical inventory, semi-annual inspection maintenance, annual logging supervisor inspection records were all current.

Copies of the O & E Procedures R/A Material License & 10CFR Parts 19, 20 and 39 were all in the file.

The training records, which included evidence of successful completion of 24 hr. training, 8 hr. training and OJT were present. This evidence comprised copies of certificates, tests and written statements pertaining to OJT.

2. Control Chart - I reviewed the use of the Annual Radiation Safety Administrative Control Chart with Mr. Haught. The Chart is current and has been posted on a bulletin board in his office to act as a reminder for necessary actions.
3. Downhole Storage - the new storage at Wynona has been completed and is ready for use.
4. Source Shields - on the truck (one truck was in) were secured (both to the truck and properly locked). The DOT Class III Yellow Labels had fallen off the Density Shield. These were replaced.

IEON

Please reference the NRC Inspection Report from the last inspection and Item B.3 of my August 9, 1990 letter. There is no Source 759B, it was a typo and should have been read 795B.

This completes my audit and I will be returning to Petro Data on or about December 15, 1990 and will submit a report shortly there after.

Very truly yours,

Alfred E. Caswell
