Docket No. 50-213

Mr. John F. Opeka
Executive Vice President - Nuclear
Connecticut Yankee Atomic Power Company
P.O. Box 270
Hartford, Connecticut 06141-0270

Dear Mr. Opeka:

SUBJECT: NRC INSPECTION REPORT NO. 50-213/93-22

This letter transmits the report of the resident safety inspection conducted by Messrs. W. Raymond and P. Habighorst of this office during the period December 12, 1993, to January 15, 1994, at the Haddam Neck Plant, Haddam Neck, Connecticut. The report covers activities authorized by NRC License No. DPR-61. This inspection focused on issues important to public health and safety. Preliminary findings were discussed with Mr. J. Stetz of your staff at the conclusion of the inspection.

During this report period, we found Haddam Neck was operated in a safe and conservative manner. The program to assure the proper operation of heat trace circuits that protect process piping works well for systems that are safety related and important to safety. However, we noted problems occurred in providing continuous freeze protection for some balance of plant and radwaste systems, and that some related design deficiencies and programmatic weaknesses exist. We note plant management has an initiative to improve your cold weather protection program and we plan to review your actions to address these issues during a future inspection.

We appreciate your cooperation.

Sincerely,

Original Signed By:

A. Randolph Blough, Chief
Projects Branch No. 4
Division of Reactor Projects
