

Northeast Utilities Service Company P.O. Box 270 Hartford, CT 06141-0270 (203) 665-5000

March 4, 1994

Docket No. 50-245 B14765

Re: 10CFR50.90

U.S. Nuclear Regulatory Commission Attention: Document Control Desk Washington, DC 20555

Millstone Nuclear Power Station, Unit No. 1
Proposed Revision to Technical Specifications
Scram Discharge Volume — Control Rod Block Instrumentation

In a letter dated November 22, 1993, 11 Northeast Nuclear Energy Company requested, pursuant to 10CFR50.90, a revision to the Millstone Unit No. 1 Technical Specifications. Specifically, the proposed revision clarified the operability requirements for the scram discharge volume water level instruments. Based upon the Staff's request, the phrase for the STARTUP/HOT STANDBY and RUN positions of the Reactor Mode Selector Switch, there shall be has been added to the beginning of note (8) of Table 3.2.3 on page 3/4 2-8. The revised page is provided as Attachment 1.

The minor change to the wording does not change the intent of the original request, and as such, does not impact the safety assessment, nor the determination that the changes do not involve a significant hazards consideration presented in the November 22, 1993, license amendment request.

If you have any questions, please contact us.

Very truly yours,

NORTHEAST NUCLEAR ENERGY COMPANY

J. F. Opeka

Executive Vice President
