Gentlemen:

Haddam Neck Plant  
Millstone Nuclear Power Station, Unit Nos. 1 & 2  
NUREG-0737 Item II.B.3 Post Accident Sampling System

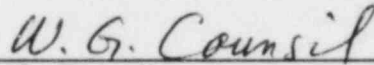

In References (1), (2), and (3) Connecticut Yankee Atomic Power Company (CYAPCO) and Northeast Nuclear Energy Company (NNECO) committed to installing post accident sampling systems at the Haddam Neck Plant and Millstone Nuclear Power Station, Unit Nos. 1 & 2 by December 31, 1982 and to have procedures in place for estimating core damage based on primary coolant sample results and other measured parameters by November 30, 1982. These systems have been installed at all three plants.

A046

Due to recent arrival of equipment, caused by the difficulties involved in identifying hardware capable of properly and safely measuring chloride concentration in the reactor coolant, training on the E.G.G. Polographic Analyzer Model 384-4 has not yet been accomplished. It is our intention to complete this training by March 31, 1983. Also, unforeseen delays in development and approval of a procedure for estimating core damage have caused us to reschedule the implementation of this procedure. Approval of and training associated with this procedure is currently scheduled to be completed by March 31, 1983.

Very truly yours,

NORTHEAST NUCLEAR ENERGY COMPANY  
CONNECTICUT YANKEE ATOMIC POWER COMPANY

W. G. Council  
Senior Vice President
