EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

0 7 During a routine pump swap, B stack gas sample pump thermal overload  
0 3 protector tripped. 'A' pump was returned to service after B pump was re-  
0 4 started and failed to produce normal flow. Stack gas sample system flow  
0 5 was interrupted for approximately twenty minutes. As a result, the  
0 6 continuous monitoring requirement of Tech Spec-3.6.A.3 was not met. This  
0 7 event is reportable per Tech Spec 6.9.2.a.2. Safety significance is  
0 8 minimal as other radiation monitors showed normal indications.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

1 0 The apparent cause of the thermal overload trip of B stack gas sample is un-  
1 1 known at this time. The inability of B pump to produce normal flow was  
1 2 attributed to worn impeller vanes. An investigation will be performed to  
1 3 determine the apparent cause of the thermal overload trip and corrective  
1 4 action appropriate to prevent recurrence. B pump was inspected and rebuilt.
