Subject: Part 20 revisions

After hearing how the meeting went I have one suggestion: re-convene the Part 20 Steering Committee just like we did several months ago on this issue. Jay Cunningham appears to be the only one fighting this battle; Congel previously stated it was not a backfit.

P.S. The rulemaking is needed to ensure that those individuals who are "occupationally exposed" as a result of their duties allowing them to be in areas of radiation exceeding 100 mrem/yr but less than 500 mrem/yr (thereby no monitoring required) do receive some kind of training -- no matter if it's a piece of paper instructing them about time, distance and shielding.
