Subject: McGuire Nuclear Station, Unit I
Docket Number 50-369
Inservice Pump and Valve Testing Program and Relief Requests

Dear Mr. Denton:

As required by 10CFR 50.55a(g), please find enclosed fifteen (15) copies of the Inservice Testing Program for Pumps and Valves, including relief requests, for McGuire Nuclear Station, Unit I. Also enclosed are six (6) copies of each flow diagram (P&ID drawings) referenced in the subject document.

The McGuire Inservice Testing Program for Pumps and Valves was developed using Section XI, subsections IWP and IWV of the ASME Boiler and Pressure Vessel Code 1974 Edition and Addenda through summer 1975. Relief is requested within this program where it has been determined to be impractical within the limitations of design, geometry, and materials of construction of components, because compliance would result in hardships and unusual difficulties without a compensating increase in the level of quality or safety.

Very truly yours,

William O. Parker, Jr.
