Energy Fuels Nuclear, Inc.
ATTN: Mr. C. E. Baker
Three Park Central, Suite 900
1515 Arapahoe
Denver, Colorado 80202

Dear Mr. Baker:

By your letter dated November 24, 1982, we have received the Energy Fuels Nuclear (EFN) quarterly effluent and environmental monitoring report for the White Mesa Mill, covering the period of July - September, 1982. This report completes EFN's requirements as specified in License Condition No. 50 of Source Material License No. SUA-1358, issued to determine compliance with the 40 CFR 190 standard.

Reporting requirements for EFN's environmental monitoring program hereby revert to those specified in License Condition No. 37 and 10 CFR 40.65. It should be noted that concurrent with the end of quarterly reporting, the requirement in 10 CFR 20.405(c) for notification of levels of radiation or releases of radioactive materials in excess of the limits specified in 40 CFR 190 is no longer suspended. Therefore, although dose calculations are not a requirement of the 40.65 semi-annual reports, EFN must continue to monitor doses to adequately meet the 20.405(c) requirement.

In addition, please be advised that no licensing action or associated fees are necessary to affect these changes in the environmental monitoring program reporting requirements.

Sincerely,

Original signed by:
J. J. Linehan
