Re: Mine Hill Township Planning
Board

Dear Dr. Brenneman:

I am attorney representing a Planning Board in western New Jersey which has an application before it of a company which will commercially use process radiation to sterilize certain pharmaceutical and other products. Our ordinance requires the applicant to obtain nuclear regulatory commission licenses. A public hearing has been tentatively scheduled January 25, 1983 in Mine Hill Township, New Jersey at the municipal building at 8 P. M. Our ordinance provides for expert testimony at public hearings for such a proposed use.

Would you be available to present information or provide testimony concerning this particular application? We realize that any commercial process involving radiation is subject to strict controls by the Nuclear Regulatory Commission but the Planning Board of Mine Hill Township is aware of the need for public education in this area.

If the circumstances permit your attendance, we would be glad to forward you the proposed process radiation use information submitted to us and answer any questions you may have. Kindly advise.

Very truly yours,

DOLAN AND DOLAN, P. A.
