EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)

02 | During normal unit operation, received condenser pit Hi level alarm. Upon investiga-
03 | tion, cracked butt welds were found at both ends of the 2D3 feedwater heater emergen-
04 | cy spill drain line (T.S.6.6.B.2.d). Normal unit shutdown was initiated to make re-
05 | pairs. The event was of minimal safety significance since all leakage was drained
06 | into the Turbine Building Floor Drain System. There was no effect on public health
07 | or safety. Previous occurrence on Unit 2 reported by R.O. #82-35/03L-0.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)

10 | The cracked welds were caused by excessive movement of the 2D3 feedwater heater nor-
11 | mal drain line. Modification M12-2-82-37 has been initiated to add restraints to the
12 | D feedwater heater drain system. The emergency spill line was rewelded and normal
13 | drain line temporarily supported until the modification can be performed during the
14 | next refueling outage.
