Dear Mr. Rosenthal, Esq., Chairman
Atomic Safety & Licensing Appeal Board

2/4/79

This letter is about the North Anna Nuclear Power Plant.
I live within 15 miles of this plant and have long been concerned about the safety of this plant. In fact its apperent that VEPCO has along history of bad management. Thay for years hid the fact that thay were bulding on a geological fault, the pump house is sinking fast and is now probability below safe limits, actual radration levels in the confinement building exceeded the predicted by 1800 %. The list goes on and on.

What I think you should do at this point is to:

- 1) Revoke VEPCO's North Anna Operating License
- 2) Hold public hearings and make public all the risks of the North Anna plant not just the ones VEPCO is forced in to revealing.
- 3) Not allow increased settlement of the pump house.

Your prompt reply covering all of these concernes would be greatly appreciated.
