HEALTHCARE**

Dear Ms. Holt,

This refers to the routine safety inspection conducted by James L. Cameron on December 11, 1993.

REPLY TO NOTICE OF VIOLATION

- A. A violation was cited for failure to perform routine thyroid monitoring. Each of the two individuals were on vacation when the bioassay came due. To correct this problem the RSO or his alternate will check the staff vacation schedule in advance of thyroid monitoring and reschedule monitoring when a conflict occurs.
- B. A violation was cited for failure to perform air effluent monitoring on a timely basis. The facility RSO or his alternate will ensure air effluent monitoring is performed on a timely basis. A trained employee will be assigned the task prior to the due date. The RSO will then follow up to be sure air effluent monitoring has been performed in a timely fashion.

ADDITIONAL INFORMATION

The inspector's recommendation of semiannual facility RSO audits is appreciated and will be implemented. These audits will be reviewed by the facility manager for completeness and adherence to this facility's Nuclear Regulatory Commission license conditions.

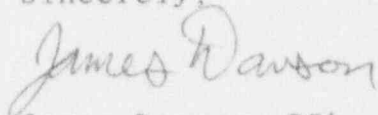

The inspector expressed concern about the plexiglass over the detectors of the package survey station. The possibility of an error in measurement leading to a package labeling mistake has been addressed by cutting holes in the plexiglass. This should minimize any possible attenuation of the radiation.
