Subject: UPDATE ON EPR

INFORMATION ONLY; NO ACTION REQUESTED

Here is an update on activities in support of the workshops on the Enhanced Participatory Rulemaking for Radiological Criteria for Decommissioning.

1. NMSS management met on Friday, December 11, 1992, with Michael Lesnick and Barbara Stinson from Keystone Center, the facilitators for the workshops on the front end of the EPR. The meeting was productive and was followed by an extended meeting with the facilitators on the background of the rulemaking, history of Below Regulatory Concern, and the options paper. We have tentatively scheduled a followup conference call between OGC, NMSS, RES, and Keystone for the afternoon of 12/22/92. Keystone hopes to have developed a draft agenda for the workshops by that time. When I receive it, I will distribute it to you for any comments or suggestions you may have.

2. We have planned a meeting with EPA on 1/8/93 to discuss the "technical underpinnings" of NRC's and EPA's rulemakings on radiological criteria (e.g., documents like NUREG/CR-5512, NUREG/CR-5849, EPA's radon model). We will also discuss the Rulemaking Issues Paper in preparation for the simulation workshop to be held on January 11-12, 1993, in the Washington metropolitan area (probably at One White Flint North). We would like to have participation by 1-2 people from each of the Regions if this can be supported by the regions. Regional representatives should be reasonably familiar with the issues associated with radiological criteria for decommissioning, regional issues involved in decommissioning, and the positions taken by affected parties on radiological cleanup issues. The facilitator and Chip Cameron are currently working out the details on the simulation workshop. I will forward information on the workshop as it becomes available.

3. The Federal Register notice on the workshops and the rulemaking was printed on December 11, 1992 at 57 FR 58727. I had previously circulated this notice attached to an earlier E-mail message. I encourage you to get a copy of the FR notice, however, because most people outside the agency will be referencing this notice and it is more concise (4 pages) than the copy I previously sent. The notice also lists the dates, general locations, and participants for the workshops in January through May 1993.

4. We have completed draft versions of the decommissioning case studies requested by the Commission for the workshop participants. The objective of the case studies is to illustrate the practical aspects of decommissioning with "real-world" experiences in remediating radiological contamination. The drafts are attached to this notice. I would appreciate any comments that you may have on the draft case studies. They are currently being circulated to the Headquarters team for comment as well. We have not completed case studies for Alcoa or Cintichem because key staff members have not been available. If you think these sites need to be included given the mix of cases already developed, please let me know.

5. We are also sending the FR notice out in the workshop packages to people

who attended the SDMP workshop for their information. These packages will go out to nearly 270 people; distributing the notice to this large a group should provide widespread notice about the public workshops.

I have been receiving many useful suggestions and comments from the regions and other offices within NMSS. Thanks for this feedback. If you have any questions or comments, please communicate them to me (mfw) or (301) 504-1298 or Bill Lahs (wrl) at (301) 504-2569. Have a joyful and safe holiday season!
