UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D. C. 20555

March 14, 1994

CHAIRMAN

Mr. André-Claude Lacoste, Director
Directorate for the Safety of
Nuclear Installations
99, rue de Grenelle
75353 Paris Cedex 07
France

Dear Mr. Lacoste:

In December 1993, the U.S.-Russian Joint Commission on Technology Cooperation held its second meeting under the co-chairmanship of U.S. Vice President Al Gore and Russian Prime Minister Viktor Chernomyrdin in Moscow. I had the honor to participate in the activities of the Joint Commission's Energy Committee, which is co-chaired by U.S. Secretary of Energy Hazel O'Leary and Russian Minister of Fuels and Energy Yuri Shafranik. Several significant accomplishments were achieved in the nuclear safety area.

A Nuclear Safety Assistance Agreement was completed that will enable concrete projects to be implemented by Russian and U.S. government agencies. Perhaps most importantly, the agreement contains liability provisions that could be significant in facilitating the participation by U.S. private companies in major nuclear projects in the Russian Federation. I have enclosed a copy of this agreement for your information.

Secondly, agreement was reached to conduct a joint U.S.-Russian study on alternative electricity sources, including nuclear power, which will enable the Russian Federation to make informed choices about its future national energy planning, including the shut-down of their less safe reactors. The final terms of reference for this study are in the final stages of approval by the two sides.

Finally, Vice President Gore and Prime Minister Chernomyrdin signed a set of Joint Principles of Nuclear Reactor Safety. One of the most important of these principles commits the Russian regulatory organization (Gosatomnadzor) to review the safety of operating reactors, especially those built to earlier standards. I am also enclosing a copy of these principles, which I hope will assist Western nations and international financial institutions to continue to press for rigorous safety measures as a basis for meaningful safety assistance to the Russian Federation.

I look forward to our continuing exchange of information and views on this important international safety issue.

Several significant accomplishments were achieved in the nuclear safety area.

A Nuclear Safety Assistance Agreement was completed that will enable concrete projects to be implemented by Russian and U.S. government agencies. Perhaps most importantly, the agreement contains liability provisions that could be significant in facilitating the participation by U.S. private companies in major nuclear projects in the Russian Federation. I have enclosed a copy of this agreement for your information.

Secondly, agreement was reached to conduct a joint U.S.-Russian study on alternative electricity sources, including nuclear power, which will enable the Russian Federation to make informed choices about its future national energy planning, including the shut-down of their less safe reactors. The final terms of reference for this study are in the final stages of approval by the two sides.

Finally, Vice President Gore and Prime Minister Chernomyrdin signed a set of Joint Principles of Nuclear Reactor Safety. One of the most important of these principles commits the Russian regulatory organization (Gosatomnadzor) to review the safety of operating reactors, especially those built to earlier standards. I am also enclosing a copy of these principles, which I hope will assist ~~Western nations~~ and international financial institutions to continue to press for ~~rigorous~~ safety measures as a basis for meaningful safety assistance to the ~~Russian Federation~~.

I look forward to our continuing exchange of information and views on this important international safety issue.

Sincerely
