Mr. Leif J. Norrholm, Chief  
Vendor Inspection Branch  
Division of Reactor Inspection and  
Licensee Performance  
Office of Nuclear Reactor Regulation  
United States Nuclear Regulatory Commission  
Washington, DC 20555-0001

- References: 1) December 16, 1993, NRC Letter Concerning Boeing Computer Services (Docket 99900902)  
2) January 25, 1994, Wyle Response, Same Subject

Dear Mr. Norrholm:

Wyle has completed the evaluation discussed in reference 2 above which confirms our initial assessment of no impact on any past nuclear work due to the error notices received from Boeing Computer Services. Our review included an evaluation for each of our operating divisions with a final review by our Quality Assurance Department. Our conclusions are summarized as follows:

- 1) GTSTRUDL has never been used by Wyle for qualification of nuclear safety related equipment.
- 2) NUPIPE-II has never been used by Wyle.
- 3) ANSYS has not been used by Wyle through Boeing Computer Services for qualification of nuclear safety related equipment.

If there are any further questions, please address them to the undersigned.

Sincerely,

**WYLE LABORATORIES**  
Eastern Operations
