Fort Calhoun, Nebraska 68023-0399

SUBJECT: NRC INSPECTION REPORT 50-285/94-05

This refers to the inspection conducted by M. Runyan and C. Paulk of this office, and a consultant, on February 28 through March 4, 1994. The inspection included a review of activities authorized for your Fort Calhoun Station facility. At the conclusion of the inspection, the findings were discussed with those members of your staff identified in the enclosed report.

This inspection examined the implementation of your program to meet commitments to Generic Letter 89-10, "Safety-Related Motor-Operated Valve Testing and Surveillance." The inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observation of motor-operated valves in the plant. The inspection revealed that you have developed and implemented a strong program to address your commitments to Generic Letter 89-10. The results of this inspection are documented on page 1 in the enclosed report.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter and its enclosures will be placed in the NRC Public Document Room.

Should you have any questions concerning this inspection, we will be pleased to discuss them with you.

Sincerely,

Thomas P. Gwynn, Director
Division of Reactor Safety
