Dr. D. W. Jones
Director, Center for Nuclear Studies
Memphis State University
Memphis, Tennessee 38152

Dear Dr. Jones:

In accordance with your request dated May 14, 1982, Amendment No. 4 to Facility Operating License No. R-127 is enclosed. The effect of this amendment is to cancel the changes made by Amendment No. 1 in the licensed operating conditions of your AGN-201 (Serial No. 108) training and research nuclear reactor.

In your May 14th letter, you reaffirm your intention to modify your facility eventually, as the opportunity arises. With that in mind, and realizing that the opportunity to acquire the additional reactor fuel from the Department of Energy might occur at a different time, you have not requested a change in the amount of enriched uranium fuel authorized for possession and use in connection with the operation of your facility. Accordingly, Amendment No. 4 does not change the authorization of section 2.B.(3) of your current license which pertains to special nuclear material.

In order to minimize confusion about the applicable technical Specifications, Appendix A, of your amended license, we are reissuing the 1976 Technical Specifications with the Amendment 4 date.

A copy of our safety evaluation related to Amendment No. 4 is also enclosed.

Sincerely,

151

Harold Bernard, Acting Branch Chief
Standardization & Special
Projects Branch
Division of Licensing

Enclosure: As Stated
