SUBJECT: IP REQUEST FOR EXPERT REVIEW OF KRSKO S/G CHANGES

By memo dated May 26, 1982 (enclosed), we were requested to review proposed fix to the Krsko Nuclear Power Plant Type D-4 S/G. Copies of provided material are enclosed.

We have developed a tentative review program in two parts and request your appropriate review inputs as follows:

Task I : By Friday A.M., June 7, 1982, provide initial comments regarding overall proposed fix and what additional information is needed to complete the review. (R. Tedesco will take these comments with him on the IAEA trip).

Task II : By June 25, provide IP detail comments on the results of our review.

The review areas include overall system operation, mechanical design, material aspects and control functions.

Bill Kane (LB#1) will be Lead PM on this effort. Please identify the specific reviewers assigned to this effort and provide to Bill as soon as possible. This effort will also assist NRR in its ongoing review of the D-4 Type S/G for domestic plants; thus mutual benefits will be achieved.
