Mr. Melvin Shupe

Dear Mr. Shupe:

30-7603

This is to request that our License Number 08-14043-01 be amended to include the following recent changes in our operation at 2212 Georgia Avenue:

1. We have appointed a new Radiation Safety Officer, Mr. Rao Nibhannapudy, whose duties will be to supervise each phase of our operation from the Radiation Safety point of view. He will also conduct periodic training sessions, establish and supervise safety record keeping, maintain personnel exposure records, and conduct periodic internal inspections. He will report any items of noncompliance and take steps to see that they are corrected immediately.
2. We have given special instruction to all members of our organization in the procedures to be followed in the safe handling of Radioisotopes, especially in precautions to be followed in the handling of Iridium 192 seeds.
3. We have put into effect finger badge service for personnel working with Iridium 192 seeds. Records will be kept of dose received.
4. We have installed a gate just inside the lab for the purpose of receiving materials and surveying on the spot. Procedures for opening and inspecting these materials are posted in the receiving area.

We hope that with the inclusion of the above changes as conditions of our license, we will be in full compliance with regulations.

Please advise if further information is needed.

We hope to submit application for renewal of this license (08-14043-01), soon. Please advise on procedures for renewal.

Thank you,

Sincerely,

Dr. David G. Mahan
