

Docket No. 50-346

License No. NPF-3

Serial No. 860

September 16, 1982

RICHARD P. CROUSE
Vice President
Nuclear
(419) 259-5221

Director of Nuclear Reactor Regulation
Attention: Mr. John F. Stolz
Operating Reactor Branch No. 4
Division of Operating Reactors
United States Nuclear Regulatory Commission
Washington, D.C. 20555

Dear Mr. Stolz:

Toledo Edison committed to provide proposed changes to Davis-Besse Technical Specifications to reflect the extent and frequency of future Auxiliary Feedwater header inspections in a letter dated August 16, 1982 (Serial No. 849). Due to the intensive resource requirements to startup Davis-Besse Nuclear Power Station from a refueling outage, we find it necessary to request a delay in our submittal of the proposed Technical Specifications.

Based on the normal review time to process a Technical Specification change request and the unique need in this instance to ensure detail documentation of the specific inspection requirements, a proposed submittal date of October 29, 1982 is required. Every effort will be made to improve on this schedule without jeopardizing the safety review on this item.

Very truly yours,

A handwritten signature in cursive script, appearing to read 'R. P. Crouse'.
