South Texas Project Electric Generating Station  
Units 1 and 2  
Docket Nos. STN 50-498, STN 50-499  
Revised Response to Notice of  
Violation (498/9005-02; 499/9005-02)

Houston Lighting & Power Company (HL&P) is changing the expected completion date for corrective actions taken to prevent recurrence in response to Notice of Violation (498/9005-02; 499/9005-02) so that these actions may be completed as part of the overall Emergency Preparedness Enhancement Program. This NOV was associated with radiological emergency response training.

Shift Radiation Protection Supervisors have received training in Offsite Dose Projections, and practical exercises have been completed in use of the dose projection nomograph, the offsite dose calculation program, and use of Emergency Action Levels. STPEGS is in full compliance at this time. In addition, HL&P planned to take actions to prevent recurrence, as previously stated in correspondence dated May 7, 1990 (ST-HL-AE-3437):

The training requirements for onshift key responders will be evaluated and revised as necessary to emphasize emergency classification, protective action recommendations and dose calculation requirements. In addition, practice problems will be issued for onshift personnel to provide them with practice in performing offsite dose projections. These additional enhancements will be in place no later than September 30, 1990.

HL&P is currently in the process of implementing enhancements in much of the South Texas Project Electric Generating Station Emergency Preparedness Program. Under the enhancement program, seminars and facility drills which will incorporate these training requirements will begin in early 1991. The overall enhancement program is expected to be implemented prior to the 1991 Graded Exercise currently scheduled for August, 1991.
