- A. Technical Specification 6.4.1. requires the station be operated in accordance with approved procedures for the normal startup of the complete facility and of all systems involving nuclear safety of the facility.

Contrary to the above, on May 19, 1982, the licensee failed to reset the main turbine trip contact buffers as required by step 3.2.112 of facility start-up procedure OP/2/A/1102/01 resulting in a reactor trip.

This is a Severity Level IV Violation (Supplement I.).

- B. 10 CFR 50, Appendix B Criterion XVI as implemented by Duke Power Company Topical Report Duke-1A, section 17.2.16 requires the licensee to report and document conditions adverse to quality to appropriate levels of management.

Contrary to the above, on February 23, 1982 an operator neither reported nor documented that reactor building spray pump 1A had been run for approximately three hours with no flow which resulted in the destruction of the pump.

This is a Severity Level IV Violation (Supplement I.).
