Consolidated Rail Corporation
Technical Services Laboratory
ATTN: R. H. Holl, Manager
Engineering Services
Second Street Juniata
Altoona, PA 16603

License No. 34-02555-01

Gentlemen:

This refers to the special closeout inspection conducted by Ms. E. Matson of this office on February 16, 1982 and August 13, 1982, of the facilities at Consolidated Rail Corporation, Cleveland, Ohio, authorized by NRC Byproduct Material License No. 34-02555-01 and to the telephone discussion of our findings with you on September 13, 1982.

The inspection included a survey of the facilities at the Collinwood Yard, Cleveland, Ohio, including the former radioisotope hot laboratory, engine test cell, and the waste storage block house. The enclosed copy of our inspection report identifies areas examined during the inspection. Our survey identified no residual contamination of your facility in excess of the limits specified in the NRC draft document "Guidelines for Decontamination of Facilities and Equipment Prior to Release for Unrestricted Use on Termination of Licenses for Byproduct, Source, or Special Nuclear Material." Consequently, this office has no objection to release of these facilities for unrestricted use.

We will gladly discuss any questions you have concerning this inspection.

Sincerely,

D. J. Sreniawski, Chief
Materials Radiation Protection
Section 2

Enclosure: Inspection Report
