U. S. Nuclear Regulatory Commission  
 Attn: Document Control Desk  
 Washington, D.C. 20555

Dear Sir:

Subject: Oyster Creek Nuclear Generating Station (OCNGS)  
 Operating License No. DPR-16  
 Docket No. 50-219

Technical Specification Change Request (TSCR) No. 214  
 RE: MAIN STEAM LINE (MSL) RADIATION MONITOR(S) REACTOR SCRAM  
 AND MSL ISOLATION FUNCTIONS

Pursuant to 10 CFR 50.90, GPU Nuclear Corporation (GPUN), operator of the Oyster Creek Nuclear Generating Station (OCNGS), Operating License No. DPR-16, requests a change to the Appendix A of the license.

Also enclosed is one signed copy of the Certificate of Service for this request which confirms service to the senior official of the township in which the facility is located.

The proposed amendment changes the Technical Specifications to eliminate the subject scram and isolation functions of the MSL radiation monitors currently contained in Tables 3.1-1 and 4.1-1 of the Technical Specifications and the associated Bases statements. This action follows the recommendations of the BWR Owner's Group (BWROG) in their Safety Evaluation, NEDO-31400A, previously approved by the NRC Staff on May 15, 1991 by letter to the BWROG.

This change request has been reviewed in accordance with Section 6.5 of the OCNGS Technical Specifications. And using the standards in 10 CFR 50.92 we have concluded that these proposed changes do not constitute a significant hazards consideration.

GPUN intends to implement this change during the ramp-up period immediately prior to the upcoming refueling outage 15R scheduled to start on September 10, 1994 and hereby request that this TSCR be reviewed and approved no later than July 10, 1994. However, the effective implementation of the license amendment will not occur until restart from the outage.

Pursuant to 10 CFR 50.91 (b) (1), a copy of this change request has been sent to the State of New Jersey Department of Environmental Protection.

Sincerely,

*for* J. J. Barton  
Vice President and Director  
Oyster Creek
