SUBJECT: NRC INSPECTION REPORT NOS. 50-361, 362/94-03 (NOTICE OF VIOLATION)

This refers to the routine inspection conducted by J. A. Sloan, and the inspectors identified in the enclosed report, of this office on February 1 through March 7, 1994. The inspection included a review of activities authorized for San Onofre Nuclear Generating Station, Units 2 and 3. At the conclusion of the inspection, the findings were discussed with those members of your staff identified in the enclosed report.

Areas examined during this inspection are identified in the report. Within these areas, the inspection consisted of selective examinations of procedures and representative records, interviews with personnel, and observation of activities in progress.

Based on the results of this inspection, certain licensed activities appeared to be in violation of NRC requirements, as specified in the enclosed Notice of Violation (Notice). The violation is the failure to log a defective vital area intrusion alarm and is of concern because supervisory personnel did not recognize the significance of the condition, even though they were aware of it. Because your corrective actions have already been reviewed and were found to have been adequate, no response to this Notice is required.

In accordance with 10 CFR 2.790(a) of the NRC's "Rules of Practice," a copy of this letter and its enclosures will be placed in the NRC Public Document Room.
