Computer Access of Environmental Data

Dear Messrs. Mullins and Hall:

Please be advised that Atlas has recently implemented a data compression utility program which allows us to double the storage capacity of our computers. Unfortunately, our Ecotrac program was developed prior to this type of technology, and we are experiencing a conflict between the two programs. At this time, we are unable to properly access our data files in the Ecotrac program and produce reports and charts. Our computer consultant is working towards resolution of this matter.

Ecotrac is a program which enables us to record, monitor, report and chart environmental data. Specifically, we have been charting the Moab mill site monthly piezometer readings, and the quarterly groundwater quality data. The data will be compiled and graphed by Canonic

Environmental, and provided as part of the response to the NRC's recent request for information. Please be assured that readings have been taken and documented for each month, and these records are on file at the mill site.

You will be notified when we have resolved our computer problem. Please do not hesitate to contact me should you have any questions or concerns regarding the aforementioned.

Sincerely,

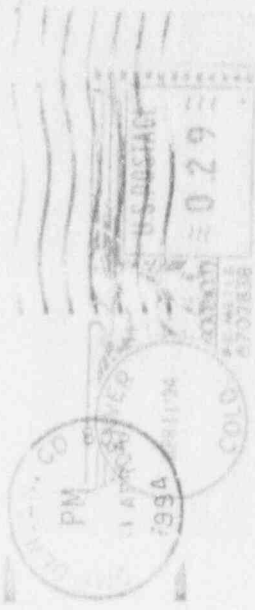

Richard E. Blubaugh
