Re: NRC License No. 34-21317-01  
Closeout Survey for Dr. Stringfield's Practice

Dear Mr. Gattone:

As discussed last Friday, 10/5/90, we have decided to close the former practice location of Dr. Barry Stringfield in Adrian, Michigan. All of the assets of that particular practice including all supplies, medical equipment and even charts were returned to Toledo, Ohio on Thursday and Friday, the 4th and 5th of October. We did assist with some of the packaging and moving of the materials and did indeed move the Cesium-137 source back to our Toledo, Ohio location on Wednesday, 10/3/90 without incident.

Prior to and following the removal of the Cesium source, a very careful survey complete with wipes of all the equipment, computers, treadmills and counter tops was completed. All areas were found to be at background levels at or below the 0.02 mR/hr. The survey was completed with our Ledlum model No. 3 survey meter last calibrated in July of 1990.

Enclosed you will find a facility diagram and the appropriate counts obtained. Should there be any questions or concerns for this closeout survey, please contact us. As we discussed, some of the individuals in the building were reportedly concerned over the disposition of the nuclear materials. The offices remain locked until final cleaning which should take place the week of the 15th.

Thank you for your kind attention to these matters. Should further information be needed, please feel free to contact us at any time.
