MINOR REVISIONS TO PROPOSED TECHNICAL  
 SPECIFICATION CHANGE CONCERNING  
 FUEL PARAMETERS

Boston Edison Company (BECo) submitted a proposed change to Pilgrim Nuclear Power Station's (PNPS) Technical Specifications concerning fuel parameters by BECo letter 90-135 dated November 8, 1990.

The attachment to this letter consists of two pages from that submittal revised for clarity. Revision to page 1 deletes the sentence "It shall be administratively controlled by the licensee" from definition "D. Core Operating Limits Report". The revision to page 219 deletes "...as amended" from the end of section 6.9.A.4.b and substitutes "...the approved version at the time the reload analyses are performed shall be identified in the Core Operating Limits Report)".

These page revisions are minor and administrative in nature and are encompassed by the "Determination of No Significant Hazards Considerations" of the November 8, 1990 proposed change. Please substitute the attached pages 1 and 219 in Attachment D of the November 8, 1990 letter.

  
 G. W. Davis
