Inspection Summary

Inspection between November 7-16, 1990 (Report No. 50-305/90021(DRSS))

Areas Inspected: Routine, unannounced physical security inspection of Management Support; Protected Area Barriers; Access Control - Personnel, Packages, and Vehicles; Alarm Stations and Communications; Power Supply; Training and Qualification; and Followup on Previous Inspection Findings.

Results: The licensee was in compliance with NRC requirements within the areas inspected.

Eight previous security-related open items were closed. However, extensive licensee actions were required during the inspection to close some of the items. The licensee's perimeter intrusion detection system and closed circuit television system represented a significant improvement over the previous systems and consists of state-of-the-art equipment.

The security organization was adequately supervised and managed, and personnel observed were knowledgeable of their duties and responsibilities.
