Perry Nuclear Power Plant  
Docket No. 50-440  
Notification of Implementation of  
GL 89-08 Pipe Erosion/Corrosion  
Examination Program

Gentlemen:

As requested by the NRC Staff by letter dated May 7, 1990, this letter provides confirmation that all actions proposed in response to GL 89-08 "Erosion/Corrosion-Induced Pipe Wall Thinning" which still remained outstanding at the time of the submittal of letters PY-CEI/NRR-1034L dated July 20, 1989 and PY-CEI/NRR-1096L dated November 14, 1989, have been implemented.

With the completion of the following activities, the Perry Nuclear Power Plant's Erosion/Corrosion Examination Program will ensure continued long term implementation of erosion/corrosion monitoring:

- (1) A Plant Administrative Procedure (PAP), entitled "Erosion-Corrosion Examination Program," describing PNPP's erosion/corrosion program, was written and implemented in December, 1989.
- (2) Detailed Inservice Inspection (ISI) instructions were completed in May, 1990 and repetitive task sheets were completed in December, 1990, to ensure continued examinations at locations susceptible to two phase erosion/corrosion. Examination locations comply with the criteria discussed in PY-CEI/NRR-0708L.

If you have any questions, please feel free to call.

Sincerely,

Michael D. Lyster
