SUBJECT: NRC INSPECTION REPORT 030-04459/94-01

This refers to the routine, unannounced inspection conducted by Mr. Richard A. Leonardi, Jr., of this office on March 30, and April 1, 1994. The inspection included a review of activities authorized by Byproduct Material License 15-06209-01. At the conclusion of the inspection, the findings were discussed with members of your staff.

The inspection was an examination of the activities conducted under the license as they relate to radiation safety and to compliance with the Commission's rules and regulations and the conditions of the license. The inspection consisted of selective examinations of procedures and representative records, interviews of personnel, and observation of activities in progress.

No violations or deviations were identified; therefore, no response to this letter is required.

The inspector noted that the licensee had developed and implemented an in-house quality assurance program that had been in effect for several years. This program consisted of annual radiation safety program audits performed by the licensee's Radiation Safety Officer with the results recorded on an audit report form, a copy of which has been sent to the licensee's president for his review.

Also reviewed were the actions you had taken with respect to the violation observed during our previous inspection conducted on February 22, 1993. The inspection verified that the corrective actions for the violation had been implemented as stated in your reply dated March 31, 1993, and that these actions were effective.

In accordance with 10 CFR 2.790 of the NRC's "Rules of Practice," a copy of this letter will be placed in the NRC Public Document Room.
