

Chair Selin + J Taylor,

Stephen Neal sent me copies of NRC SALP Brunswick 93' + Docket Nos 50-324-325 regarding Directors decision denying Stephen Kohn's petition.

Enclosed 4/30/93^{letter} sent to Chairman Selin + also resent in Aug 93 still unresponded to... Much of it is still timely + requires answers.

Further questions - when will an updated study of radiation exposure to air + water around Brunswick be released? 91' was last one I believe.

Is NRC currently investigating possibility of closure of the 30 GE Mark II's due to their abysmal records?

Why do INPO investigations + SALP studies vary so much. Why is INPO almost always much more complete + critical in their investigations of reactors?

Thank you for a timely reply to these questions + the ones in my 4/30/93 letter.

Sincerely

SK Adair
