Commissioner Victor Gilinsky
U.S. Nuclear Regulatory Commission
Washington, D.C. 20555

Commissioner Gilinsky:

I urge you to make Pacific Gas & Electric Co. recalculate the entire seismic safety systems at Diablo Canyon! The Brookhaven study should be taken seriously. I don't trust PG&E to admit to having the need for hundreds of modifications at Diablo Canyon Unit #1 unless they are completely and independently audited. How many more design errors in key safety systems will be found? PG&E has lied in the past, and you need to make sure that they do what they are told.

With all the serious problems at unit #1, I begin to wonder how well unit #2 was built. Diablo Canyon's unit #2 must get a full review of all its seismic design systems that pertain to safety.

I realize that you represent the nuclear industry and its general negligence, but please take some responsibility for making sure Diablo Canyon is even minimally complying with safety standards. Thank you very much for any consideration you give these issues.

Sincerely,
Scott Schulke
