Gentlemen:

VIRGINIA ELECTRIC AND POWER COMPANY
NORTH ANNA POWER STATION UNITS 1 AND 2
SECOND TEN-YEAR INSPECTION INTERVAL
INSERVICE INSPECTION PROGRAM PLANS

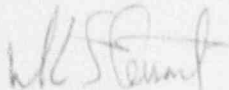

On November 1, 1990 for North Anna Unit 2 and November 21, 1990 for North Anna Unit 1, Virginia Electric and Power Company submitted the latest Inservice Inspection Programs for the second inspection interval. As committed in that correspondence we are submitting the second interval inservice inspection program plans. These program plans identify the specific components and component supports selected for examination during the second ten-year interval. The program plans also provide details of the examinations and tests to be performed.

These inservice inspection program plans meet the requirements of the applicable editions of Section XI of the ASME Boiler and Pressure Vessel Code, i.e., 1983 Edition, Summer 1983 Addenda, for North Anna Unit 1 and 1986 Edition for North Anna Unit 2. As identified in our November 21, 1990 letter, the North Anna Unit 1 program plan includes some of the enhancements of the 1986 Edition of the Code making the Unit 1 program similar to the Unit 2 program.

To facilitate your review of these program plans, we will provide one set of reference drawings for each unit under separate cover to the NRC Project Manager. We will also provide a copy of each program and one set of the reference drawings for each unit to the NRC's reviewers at EG&G Idaho, Inc.

Should you have any questions or require additional information, please contact us.

Very truly yours,

W. L. Stewart
Senior Vice President - Nuclear
