

APR 25 1994

Docket No. 50-341

The Detroit Edison Company  
ATTN: D. R. Gipson  
Senior Vice President  
Nuclear Generation  
6400 North Dixie Highway  
Newport, MI 48166

Dear Mr. Gipson:

SUBJECT: PHYSICAL SECURITY INSPECTION AT THE FERMI 2 FACILITIES

This refers to the inspection conducted by Mr. G. Pirtle of this office between March 21 and April 5, 1994. The inspection included a review of authorized activities for your Fermi 2 facility. At the conclusion of the onsite inspection, the findings were discussed with those members of your staff identified in the enclosed inspection report.

Areas examined during the inspection are identified in the report. Within these areas, the inspection consisted of selective examination of procedures and representative records, and interviews with personnel.

No violations of NRC requirements were identified during the course of this inspection. The security force continues to be well managed and effective self assessment efforts were a strong contributor to the excellent performance by the security force observed during this inspection. The security force's performance was excellent in response to the turbine event which occurred on December 25, 1993. Some "lessons Learned" however were evident and are addressed in Section 5 of the Report Details. Your security staff should aggressively evaluate and address these issues.

In accordance with 10 CFR 2.790 of the Commission's regulations, a copy of this letter, and the enclosure to this letter will be placed in the NRC Public Document Room.
