On December 3, 1990, General Electric Company's Nuclear Fuel and Components Manufacturing (NF&CM) submitted a license amendment request for permission to utilize the Uranium Recovery from Lagoon Sludge (URLS) project facility for the purpose of conducting uranium recovery development and processing. In order to provide the NRC with a clear understanding of the proposed process, the submittal contained information of a proprietary nature and was requested to be withheld from public disclosure.

NF&CM hereby submits a non-proprietary version of the 12/3/90 submittal as committed in the application.

Since this is a major addition to our current licensed activities, we have prepared this non-proprietary version in a format and page numbering sequence for insertion into Part I and Part II of our License Renewal Application dated 5/22/89.
