JAN 0 8 1979

MEMORANDUM FOR: A. Schwender, Chief  
Operating Reactors Branch No. 1, PDR

FROM: J. T. Collins, Chief  
Effluent Treatment Systems Branch, PDE

SUBJECT: REQUEST FOR EXTENSION TO SUBMIT DRAFT EFFLUENT  
TECHNICAL SPECIFICATIONS

This memo is in response to a letter from E. Uroy, Carolina Power & Light Company, to you dated December 29, 1978, in which CP&L has requested an extension for submittal of draft effluent Technical Specifications for H. B. Robinson. By a letter from D. Grimes to all licensees on November 15, 1978, CP&L was requested to submit draft Technical Specifications by February 15, 1979 (90 days from date of letter). CP&L's letter dated December 29, 1978 (copy attached), requests a revised submittal date of April 15, 1979. We find this revised submittal date unacceptable. It should be noted that CP&L had a copy of the draft Technical Specifications since July 1978, therefore, the reasons noted in the above letter for the delay are not valid. At no time during the period July to November 1978 did we advise CP&L to defer working on their submittal. We recommend that CP&L be requested to submit the draft Technical Specifications by February 15, 1979 as originally requested. In the event CP&L can not provide a complete submittal by this date, then they should be advised to submit to us those portions that are complete and submit the balance of the material within 30 days.

APPENDIX I STANDARD TECHNICAL SPECIFICATIONS

Dear Mr. Schwencer:

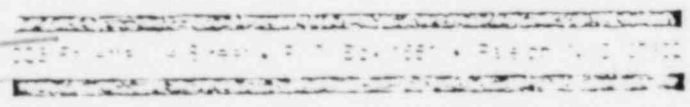

On December 16, 1978, we received a copy of Mr. Brian K. Grimes' letter transmitting Revision 1 of Draft Radiological Effluent Specifications for PWRs and also NUREG-0133, "Preparation of Radiological Effluent Technical Specifications." It is our understanding that this letter was not transmitted to Carolina Power & Light Company on its intended distribution date of November 15, 1978, due to a mailing error at the NRC.

Mr. Grimes' letter requested that Carolina Power & Light Company submit proposed technical specifications within 90 days of the date of his letter. We have reviewed the guidance enclosed with Mr. Grimes' letter, and members of our staff attended a December 5, 1978, seminar in Atlanta, Georgia conducted by the NRC staff. Having reviewed the guidance and met with the staff, we find that it is not possible to meet the schedule outlined in the attachment to Mr. Grimes' November 15, letter. Accordingly, we request an extension for submittal of proposed effluent technical specifications until April 15, 1979. There are several substantiating factors to support our requested extension. First of all, we have not received a copy of the NRC computer programs as of late December, 1978, and some time will be required to review and utilize these programs.

Because of the substantial work which will be required to prepare the proposed effluent technical specifications, we are presently using consultants and evaluating the needs for further consultant services. However, our consultants have informed us that they will need at least a 60-day extension beyond the February 13, 1979, date. Carolina Power & Light Company will make every effort to minimize our turn-around time upon receipt of the information from consultants, and we believe we can make a complete submittal by April 15, 1979.

We would appreciate a decision from you regarding this extension by January 15, 1979. Should you wish to discuss this matter in any further detail, please do not hesitate to contact our staff.

Yours very truly,

  
E. E. Utley  
Senior Vice President  
Power Supply
