RE: License No. 19-28373-01
Docket No. 030-31112

Dear Sir,

In response to your letter of August 6, 1990, I am sending this statement outlining the steps taken by WOLFE BROS., INC. to comply with NRC regulations and avoid further violations.

On July 11, 1990, all persons licensed to operate nuclear gauges were issued memorandums outlining their responsibilities during operation and transportation of gauges. I reviewed with our employees the areas in which we were in violation of NRC regulations. Licensed operators signed this memorandum acknowledging that he or she understood what had to be done to prevent further violations. For example, wearing badges at all times and the need to supply shipping papers during transportation. Documents were reviewed by workers involved and instructions were given on how to properly transport gauges.

Also, because posting of all literature was not practical, we have posted a notice describing the documents available to employees regarding the hazards associated with the handling of our nuclear gauges as well as proper use of gauges and standards for protection against radiation. "NOTICE to EMPLOYEES" is also posted at this time.

I feel at this time, that we have complied with all the requirements resulting from the violations of June 28, 1990. It is my opinion that myself and the other operators have a new awareness of responsibilities associated with these devices and are striving to meet all requirements now and in the future.

Sincerely,

Larry Ecton
