Attention: Mr. J. G. Keppler  
Regional Administrator

RE: WM. H. ZIMMER NUCLEAR POWER STATION UNIT 1  
I.E. INSPECTION REPORT NO. 81-27, ITEM 2,  
PIPE LUG ATTACHMENTS, DOCKET NO. 50-358,  
CONSTRUCTION PERMIT NO. CPPR-88  
W.O. #57300, JOB E-5590, FILE NO. NRC-1

Gentlemen:

This letter constitutes a follow-up to our previous response, QA-1929, dated August 24, 1982 regarding Item 2 of the subject Inspection Report.

In the previous response, CG&E stated that all pipe lugs, similar to the one identified by the Commission in the subject report, would be penetrant examined. There are thirty-four (34) such lugs in piping systems, of which twelve are in process. The remaining twenty-two (22) completed welds have been dye penetrant inspected with twenty (20) identified as having indications which have been documented on Nonconformance Reports.

A follow-up report will be submitted by November 30, 1982 to describe the necessary corrective actions required to resolve this concern.

We trust the above will be found acceptable as a follow-up report concerning the subject deficiency.

Very truly yours,

THE CINCINNATI GAS & ELECTRIC COMPANY

By *E. A. Borgmann*
