EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10) With the reactor operating at 63% power, the STA ran P-1 (periodic core performance log) without the benefit of OD-1 (LPRM calibration). The P-1 subsequently indicated a FRTP of .627 and a CMFLPD of .653. OD-1 was not run due to "C" Tip machine being inop. Corrective action was initiated within the required time span. The health and safety of the public were not affected by this event. This is a repetitive event as last reported in LER 50-366/1982-086.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27) Control rod withdrawal in areas of low xenon concentration and a poor base distribution on the P-1 contributed to the high peak. APRM gains were adjusted to read CMFLPD within 15 minutes. Efforts to run OD-1 will be made and control rod patterns will be selected to minimize the peak, prior to initiating P-1.
