EVENT DESCRIPTION AND PROBABLE CONSEQUENCES 10  
02 On two occasions, on September 27 and 28, 1982, it was discovered that the Reactor  
03 Coolant System (RCS) subcooling margin monitor had failed. In both instances, the  
04 monitor was declared inoperable and Action Statement 3.3.3.7.a was entered. RCS wide  
05 range temperature and pressure indication was operable allowing calculation of sub-  
06 cooling margin. The events, therefore, constituted operation in a degraded mode in  
07 accordance with Technical Specification 6.9.1.9.b.

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS 27  
10 In the first case, a computer logic board caused a malfunction in the process computer  
11 which rendered the subcooling monitor inoperable. The second problem apparently  
12 involved the previous repair of the computer. The failed logic board was replaced  
13 and in the second case, the point was reset; no further problems were noted.
