EVENT DESCRIPTION AND PROBABLE CONSEQUENCES (10)
0 2 On two occasions, on September 26 and 27, 1982, during routine operation of the 100'
0 3 Elevation Containment Air Lock, an operator observed that there was no indication of
0 4 seal interspace air pressure. On the second occasion, the air lock also failed the
0 5 seal leakage test. In both cases the air lock was declared inoperable and Action
0 6 Statement 3.6.1.3.a was entered. At least one door was maintained closed in each
0 7 instance, providing containment integrity. The occurrence constituted operation in a
0 8 degraded mode in accordance with Technical Specification 6.9.1.9.b. (82-102, 82-090,
7 8 9 82-056, 82-055, 82-051) 80

CAUSE DESCRIPTION AND CORRECTIVE ACTIONS (27)
1 0 The loss of air to the seal interspace was due to a loose pivot on the air interlock
1 1 linkage. The excessive seal leakage was caused by the failure of the seal bonded
1 2 joint. The loose pivot was tightened, and the failed seal was replaced. In both
1 3 cases, the air lock was satisfactorily tested and the action statement was terminated.
