

UNITED STATES
NUCLEAR REGULATORY COMMISSION
WASHINGTON, D. C. 20555

DEC 18 1990

Docket No. 50-346

Mr. D. C. Shelton
Vice President-Nuclear
Toledo Edison Company
Edison Plaza - Stop 712
300 Madison Avenue
Toledo, Ohio 43652

Dear Mr. Shelton:

SUBJECT: INTERFACING SYSTEM LUCA INSPECTION (50-346/89-201)

On March 28, 1990, a meeting was held between NRC and Toledo Edison to discuss the findings from the NRC inspection at Davis-Besse Nuclear Power Station (DBNPS) from October 30, 1989 through November 9, 1989 on interfacing system loss-of-coolant accident (ISLOCA). Toledo Edison provided clarifications and additional information on Davis-Besse capability to deal with ISLOCA. At the meeting, the staff informed you that we would consider the information provided in the meeting and any follow-up comments. Toledo Edison's letter dated April 27, 1990 submitted formal comments on the specific inspection findings and open items discussed during the March 28, 1990 meeting.

The NRC acknowledges that these comments are consistent with the position taken by Toledo Edison during the March 28, 1990 meeting. The staff acknowledges Toledo Edison is developing a program with the goal to have a comprehensive prioritized Check Valve Preventive/Predictive Maintenance Program with a basis similar to that developed for motor-operated valves (MOVs) and air-operated valves (AOVs) at Davis-Besse. These comments will be considered by Region III during any subsequent followup inspections to this inspection.
