December 21, 1990

U. S. Nuclear Regulatory Commission
Att: Document Control Desk
Washington, DC 20555

Gentlemen:

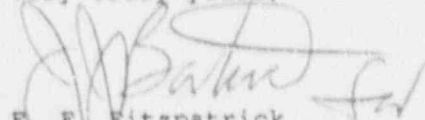

Subject: Oyster Creek Nuclear Generating Station (OCNGS)
Docket No. 50-219
Technical Specification Change Request No. 185, Supplement 2
24-Month Cycle Surveillance Extensions

This letter provides replacement Technical Specification pages to be inserted into Technical Specification Change Request (TSCR) No. 185, previously submitted on March 2, 1990. The attached Technical Specification page 4.1-8 which was included in TSCR No. 185 has been amended in the interim via Amendment No. 141 to Provisional Operating License No. DPR-16. The attached Technical Specification page 4.13-2 is revised to maintain the existing surveillance interval for the High Range Radioactive Noble Gas Effluent Monitor channel calibrations since these surveillances are not being extended. Accordingly, these pages should be substituted for the corresponding Technical Specification pages in TSCR No. 185.

Each revision is an editorial change to maintain the once per 20 month interval for refueling outage surveillances not being extended. This change in nomenclature is consistent with the original intent of TSCR No. 185.

These changes to our Technical Specification Change Request No. 185 are editorial in nature as defined in 51FR7744, Section I.C.2.e.(1), and therefore have no effect on the safety evaluation justifying the proposed amendment or on the corresponding no significant hazards consideration conclusions.

Very truly yours,

E. E. Fitzpatrick
Vice President and Director
